Results may vary depending on individual circumstances.*

How does Renavive prevent new stones from forming?

Renavive™ helps prevent new stones from forming by maintaining the balance of urinary pH as well as supporting the kidneys by keeping the minerals in your urine dissolved.

Can Renavive flush out all stones?

The brilliance of Renavive™ lies in its ability to act directly within your kidneys on the stone itself. Stone particles are usually bound together by mucin, a substance that acts like glue to hold the stone together.

By acting upon this mucin, the ingredients in Renavive™ help break the stone apart. In addition, Renavive™ helps your kidneys produce more urine which helps flush out the stone regardless of the type.

How soon will Renavive begin to work on my kidney stones?

Renavive™ was designed to begin working as soon as you take the first capsule. The advanced ingredients are quickly absorbed by the body and released into the urine where they immediately begin

to disintegrate the stone material. The actual time that it takes to completely disintegrate and flush your particular stone depends on its size and chemical composition.

How long should I take Renavive?

It is recommended that Renavive™ be taken consistently for at least 3 months to achieve optimum results and effectiveness. Results may vary depending on individual circumstances.

What is the recommended dosage?

The recommended dosage is 2 capsules daily. For best results take on an empty stomach. One capsule in the morning and one in the evening with a glass of water. Be sure to drink plenty of water throughout the day to help facilitate the removal of the stones.

Is Renavive safe?

Renavive™ is an all-natural blend of herbal extracts and minerals. It is considered a dietary supplement.

Does Renavive have any side effects?

Renavive™ is an all natural dietary supplement, however we do not recommend you use the product if you are pregnant or nursing. In addition, patients who have a kidney infection or renal failure should not take this product.

RENAVIVE ADVANCED FORMULA

Phyllanthus Nirui Phyllanthus nirui in the Spanish common name is Chanca Piedra, and literally means “break stone”. Supports the health of the kidneys. Phyllanthus Nirui has been used to eliminate kidney stones.

Ficus Racemosa Assists in easing the pain by relaxing the muscles.

Celery Seed Extract Celery Seed is an excellent diuretic that promotes the flow of urine through the kidneys. Its diuretic action is known to help kidney problems including stones and gravel. Its antiseptic properties ease urinary inflammation and benefits the overall health of the urinary tract.

Bergenia Ligulata It helps dissolve preformed

stones and aids in the prevention of new stones.

Boerhaavia Diffusa Flushes the kidneys in order to remove any lodged gravel and pieces of the stone. Also, used to alleviate swelling and ease inflammation of the urinary tracts.

Didymocarps Pidecellata Traditional effective herb which has been established as a successful support in treating kidney stones.

Lawsonia Inermis Proven to have an effective anti-bacterial activity that prevents bacteria from infecting the urinary lining which can be irritated by the stone.

Parsley Seed Extract Helps to promote kidney health. Parsley Seeds have been valued since ancient times for their soothing, diuretic effect on those with kidney ailments and are believed to help expel kidney stones.

Hemidesmus Indicus Increases urinary output within the kidneys which can aid in stones being flushed out.

Raphanus Sativus Effective anti-bacterial that helps prevent urinary infections associated with kidney stones.
